Vedha Vishal A

+91 6382035674 | vedhavishalarulanand@gmail.com | Salem, Tamil Nadu | LinkedIn | GitHub

Summary

Computer Science graduate focused on backend development with Java and Spring Boot, with a strong interest in solving real-world problems. I build secure, scalable microservices with REST APIs and enjoy owning projects end to end, from designing the services to CI/CD pipelines and cloud deployment.

Education

Amrita Vishwa Vidyapeetham – B.Tech. in Computer Science and Engineering
2022 – 2026 | CGPA: 7.35/10

Notre Dame of Holy Cross (CBSE) – Higher Secondary (Class XII)
Percentage: 85%

Projects

The Doora Project | *Java, Spring Boot, Kafka, MySQL, Docker, Azure* Live GitHub

- Developed solo: a platform where local service providers such as plumbers, electricians and cooks register and clients book them, using a microservice architecture of 5 Spring Boot services exposing REST APIs, each with its own MySQL database.
- Implemented stateless token-based authentication stored in HttpOnly cookies, with role-based access rules and per-service CORS configuration.
- Designed the booking lifecycle (Booked, Completed, Cancelled, QuoteDeclined, Expired) with OTP verification on arrival and a two-round quote flow.
- Published booking events to Kafka after each transaction commits, keyed by booking id across 3 partitions to keep per-booking order; a separate Email service consumes them and sends updates to both sides.
- Built CI/CD pipelines with Jenkins that build and JUnit-test each service with Maven, package Docker images, and deploy them on Microsoft Azure, with request-id tracing across services.
- Load-tested a production replica with k6, Prometheus and Grafana: 450 req/s and 800 concurrent users at p95 $<$ 60 ms, 0% errors; traced bottlenecks to Caddy memory limits and slow bcrypt hashing under login bursts.

Violence Detection in Surveillance Video | *Python, CNN* GitHub

- Collaborated in a team of 3 to develop a model that analyzes both RGB frames and optical flow to detect violent activity in surveillance footage.
- Improved results by adding learned feature fusion with temporal attention, so the model weights the most important moments in a clip.

Fraud Detection in Classroom Assignments | *Python, Flask, MySQL* GitHub

- Collaborated in a team of 5 to design a Flask backend with modules for plagiarism detection, AI-content detection, similarity clustering and trend analysis.
- Built batch evaluation of submissions that stores plagiarism and AI-content scores in MySQL and generates a comparison dashboard and automated PDF reports.

Technical Skills

Languages: Java, Python, SQL, HTML, CSS
Backend: Spring Boot, Spring Data JPA, REST APIs, Microservice Architecture, System Design
Databases & Messaging: MySQL, Apache Kafka
DevOps & Cloud: Docker, Git, Jenkins, Azure, Maven
Quality & Monitoring: JUnit, SonarQube, k6, Prometheus, Grafana
Tools: IntelliJ IDEA, VS Code, Postman, Jira, LLM-Assisted Engineering

Certifications and Awards

Certification: Master Spring Boot Development – Telusko
Certification: Artificial Intelligence, Deep Learning – Infosys Springboard
Award: Finalist, Generative AI Hackathon hosted by Value Health (2024)
